John Meyers to Scottie Sharpe | March 14, 2025

Loving the updates Scottie!

I'm sure you're well aware as the master of this domain, but the speedometer was off; I think gearing for the sidecar was implemented without changing the speedometer.

Also, wondering if you could find a 6v LED to replace the stock headlight bulb and make it a lot brighter; that'd be a real safety improvement for occasional rides home at night.

Thank you so much!!! John

Scottie Sharpe to John Meyers | March 14, 2025

I'll look into the speedometer and the gearing to make sure it's correct.

If you are serious about a Performance headlight, then I would recommend upgrading to the 12 V charging system and H for halogen headlight. With this system, you can only get a headlight, but you also get the ability to run 12 V accessories, such as a USB charger for your phone or a luxurious heated jacket or gloves or grips or something like that

Hey Scottie,

It would appear from instagram you've put out two fine steeds since the below email (a delightful red 51/3 and another with a Steib sidecar)...

Does this mean my bike is next?!

I wanted to confirm a few finer details since we've been discussing over a year+ long timeframe:

Speedometer correct for sidecar gearing 12v conversion & halogen headlight/12v lights Solid seat bushing

Thank you for your efforts!

Hoping to see the bike soon!

John

>> confirmed on these details:
Speedometer correct for sidecar gearing
12v conversion & halogen headlight/12v lights
Solid seat bushing

I'm currently out of the shop. I'm traveling overseas for Chinese new year. Will get back see you in a couple weeks with current updated details.
